

Generic medication

Same quality, better price.

We offer many generic options to help keep your medication as affordable as possible.

Generic medications work just like brand-name equals.

A generic has the same active ingredients, strength and dosage as its brand-name equal. It provides the same quality and performance. Generics don't have high development costs.¹ That's why they cost you less.

Generics are safe.

The U.S. Food and Drug Administration (FDA) requires generics to be as safe and effective as brand-name equals. Both types of medication must meet the same FDA standards.¹

Here's how to save with generics.

Current prescriptions: Ask your provider or pharmacist if you can replace your brand-name medication with a generic.

New prescriptions: Ask your provider if there's a generic option.
